Sub: Development of 107 mm² silver bearing copper contact wire
 (silver content 0.1%).

Ref: This office letter of even number dated 20.3.1995.

In terms of Item 2.1 of XVIIth MSG(TRD) meeting held at Eastern Railway on 16th & 17th January 1995 and also item 3.1 of XXth MSG(TRD) meeting held at Northern Railway, Shimla on 25th & 26th September 1997, it is requested that developmental order for silver bearing copper contact wire, 107 mm² may be placed at the earliest. While placing the order, type of jointing technique should also be specified. The contact wire would be put on field trials in limited quantity in suburban sections where rate of wear of contact wire has been observed to be on higher side.

It is clarified that the suppliers presently approved for hot rolled contact wire (with joints) may be considered for placement of this developmental order. M/S Veekay Industries, Delhi have already confirmed to this office about the development of silver bearing contact wire. As this type of contact wire is being developed for the first time for Indian Railways, it's prototype testing shall be witnessed by RDSO. Please arrange to place the order expeditiously with the advise of this office.
